## Microfinance Solution

## Mobile Teller Banking

Probanx is proud to announce the availability of a Mobile Teller Banking solution based on a customised POS (point of sale device) working on any GSM mobile phone network.

This new Mobile Teller Banking will revolutionize the microfinance banking sector by enabling the banks to reach many more clients in the cities as well as in remote areas and facilitate banking transactions at a low cost.

### The device:

The EFTPOS (Electronic Fund Transfer Point of Sale) unit is a robust model already used worldwide for card and payment transactions.

It includes a large screen, an ergonomic keyboard, a printer, and readers for magnetic stripe and smart cards.

It communicates with the host server via wireless and mobile phone networks.

### The benefits to the bank are:

- Acquire and sustain new clients in remote areas with no electricity or banking facilities
- Save the high cost of opening and operating bank branches
- Lower the transaction cost – only one GSM call
- Real-time transaction processing
- Direct connection to CorePlus banking system
- No Satellite, no gateway provider, no internet service provider
- Full accountability – no fraud
- Gain the competitive advantage
- Enhanced public image as a bank using latest technology

### The Solution:

The Mobile Teller module is fully integrated with the CorePlus banking system and gateway. Thanks to this integration, numerous reports and statements are providing the analysis and details that allow the bank to follow-up and control the transactions in real-time at all levels.
